

SoundStand™ ST-95 manual

SoundSpot™ ST-95 Stand for SP-1 speakers *Installation Instructions* (optional units)

Carefully fasten the tapered tube to the base. **Make sure that the tube is perpendicular to the base. Do not use mechanical tools or excessive force.** If for some reason there is a gap between the tube and the base, it means the tube was not screwed in completely into the base. Please repeat the process with the tube positioned precisely perpendicular.

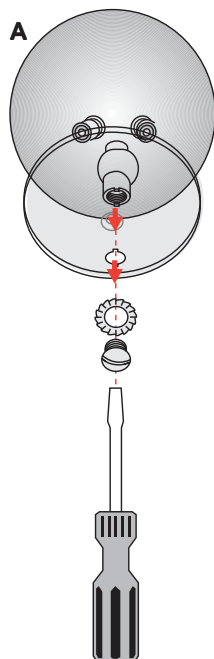

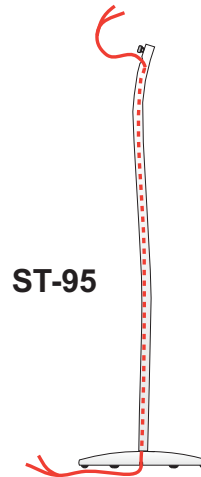

To protect delicate floor surfaces use the supplied rubber pads and press them onto the bottom of the stands base in six different locations.

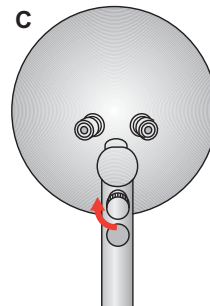

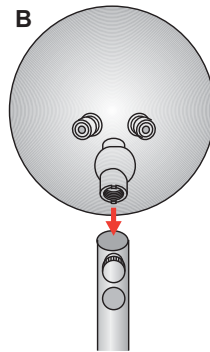

Conceal the cable in the SoundStand ST-95

Slip the speaker cable through the hollow tube, and out of the opening near the top of the tube (under the bolt).

Connect the speaker to the stand by removing the speaker base (fig. A) and insert the exposed joint into the stand tube (fig. B). Secure the bolt (fig. C), locking the speaker to the stand.

To complete the setup, connect the speaker cable to the speaker's input terminals, following the installation instructions in your speaker manual.
